CO1 - AT - 1 Cloud Computing

1. Definition:

Cloud Computing is the delivery of Computing Service over the internet.

1. On demand Self-Service -

Use resources whenever needed.

2. Broad network access.

Acess through mobile, laptop. or tablet.

3. Resource pooling:

Share resources among users.

4. Rapid elasticity:

Increase or decrease resources quickly.

Example:

Google Drive.

2.

Mainframe - Large Centralized Computers.

Personal Computers - Individual Computing

Client Server - Connected Computers.

Distributed Computing - Multiple Computers works together.

Virtualization - one server runs multiple virtual machines

Internet evolution: Applications accessible online.

Cloud Computing: Services delivered over the internet.

3.

Definition: Virtualization allows one physical server to run multiple virtual machines.

Advantage:

- Saves cost
- Improves resource utilization.
- Runs multiple operating System.
- Provides flexible resource allocation.

Difference:

Virtualization — Technology that creates virtual machines.

Cloud Computing — Delivers computing service over the internet

Ex: VMware ESXi (Virtualization), AWS (cloud computing).

---

4. Definition:

A data center is a facility containing servers, storage, and networking equipment.

Stores data

Processes information

Connects users through networks.

Protects data using security systems.

Provides reliable services and backups.

Supports increasing user demand.

Example: AWS data centers.

5.

Model	Simple meaning	Example.
Iaas	Rent infrastructure	Amazon EC_2
Paas	plaitform to build apps	google App Engine
Saas	Ready-to-Use-Software	goolg app Engine
Xaas	Anything / Everything as a services.	Different It services delivered by cloud.

Iaas - Virtual Services

Paas - Development platform and tools.

Saas - Ready to use Software

Xaas - Different It services derived through cloud.
